

```
# Team Snaps (Emma Buller, Theo Fahey, Angela Zhang)
# SoftDev
# P00 -- Make Quick (Wikis!)
# 2021-10-25
```

Wiki either about us or some topic with a lot of stats (like football)
Basically something with a lot of statistics

Parts of the Main Page

Main Page

- Leads you back to main page with search bar and section drop down

Section

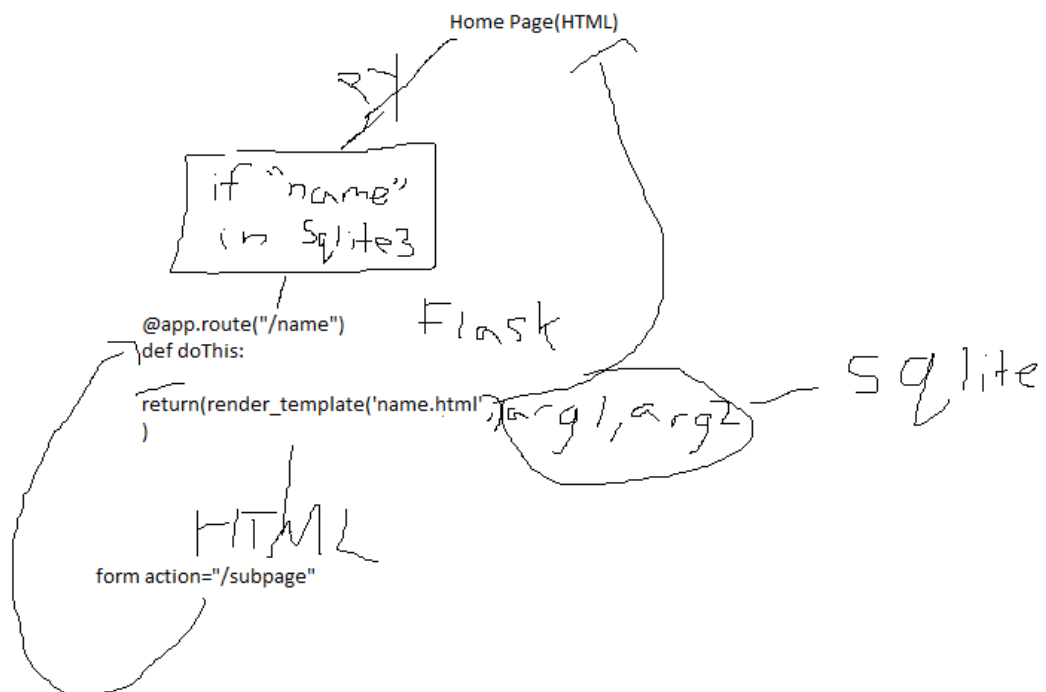

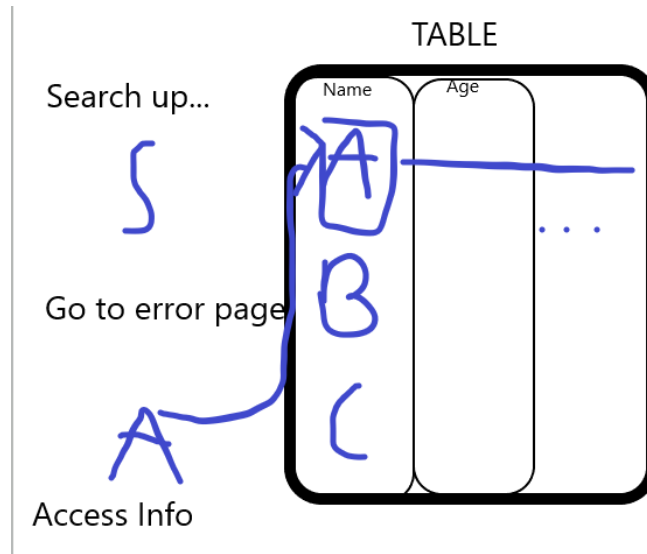

- Leads you to the Wiki pages
 - Start with general pages (basically about us, or sports)
 - Then there are pages you can access from those (family members, hobbies, etc.)
 - Each page could have its own table
 - The paragraph info could be in the html file
 - The basic info (date of birth, age, etc.) could use templates.
 - Template inputs stored in databases

Search

- If term searched is not in wiki, load error page
 - Insert errors
- Searched term in wiki -> go to wiki page
 - Top section will still display main page and sections tab
 - Also maybe a search bar?

Purpose of Functions/Roles

- Html files (Angela ???)
 - Write paragraph information
 - Insert templating stuff in them (the fast fact part)
 - Holds the error page as well
 - Link things through files
- Flask (Theo)
 - Templates
 - Put the flask template code into the files
 - Interpret forms (search bar)
 - Make the search bar work
 - Uses code from K15
- Python
 - Redirection (app.py) (Theo)
 - Add pathway to error page
 - Add pathway to redirect to main from any page
 - Add pathways to various wiki pages
 - Add pathway from search bar to wiki page
 - Sqlite module(such as sqlite functions) (Emma)
 - Select row
 - Select column with primary key
 - Search through column/table and match for input
 - Make the actual tables
- Sqlite (Emma)
 - Store info inserted into templates
 - Make the tables
 - I guess someone could organize information in the tables

- = webpages
- = buttons
- = error
- = possible path
- = sub-webpage
- = end page
