- Displays the most recent addition to the story by checking the story table
  - Form where user can input text for an entry
  - Entry is added to the story table
- View Story page:**
- Entire story is displayed by checking the story table

Site relies on one database. There is an accounts table and a table for every story created. Story databases can cross check with account database to prevent a person from editing a story multiple times.

- Tasks:**
- Sadid** - designing database for accounts, account creation, story creating and editing functionality
- Aaron** - base, login page, displaying table of stories contributed to
- Gavin** - designing database for stories and accounts, story creating and editing functionality
- Angela** - templates, displaying recent stories
